

# No-Weld Adjustable Bolted Bracing

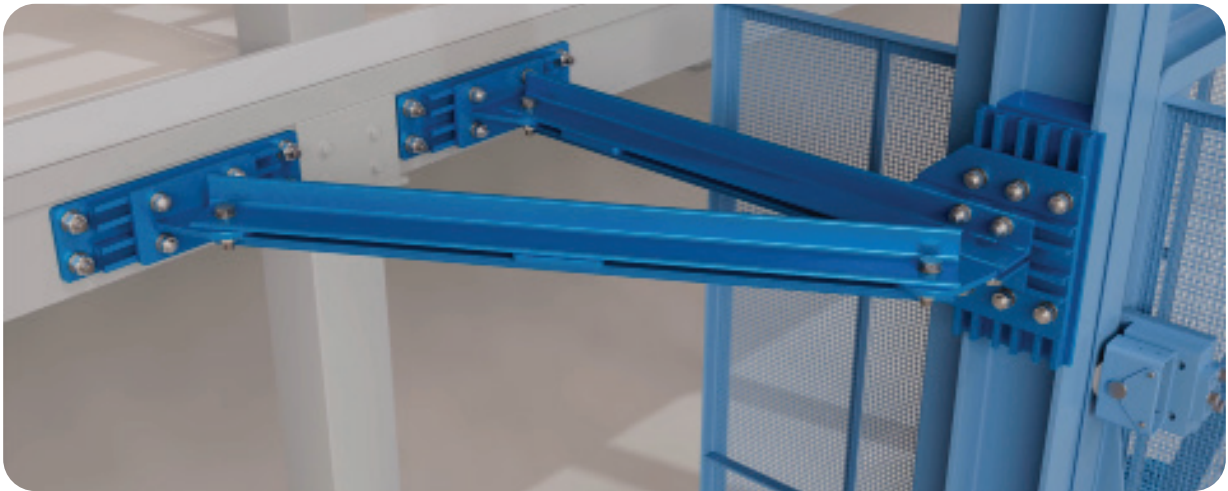

## What is No-Weld Adjustable Bolted Bracing?

PFlow's no-weld adjustable bolted bracing is designed for edge of mezzanine applications in environments that prohibit welding. This bracing removes the requirement for site welding and cutting while maintaining the strength and stability of welded bracing.

## Why is our's unique?

While we are not the first to offer adjustable bolted bracing, PFlow's bracing offers what the competition does not:

- Horizontal adjustment at the mezzanine or wall bracing strut
- Vertical and horizontal adjustment at the column bracing struts
- Seismic rated / PE certification

## Specifications

<b>Application</b>	Edge of mezzanine
<b>Environment</b>	Indoor or Outdoor
<b>Bracing Struts</b>	24" W / 24" H
<b>Bracing Arms</b>	Cut to length at PFlow per job specifications
<b>Adjustability</b>	2" on horizontal bracing struts 2" on vertical bracing struts
